

Introduction to SageMaker

SageMaker Microservices & Machine Learning.

In this lesson, we will get an introduction to several features within Amazon's Sagemaker service.

In a nutshell, Sagemaker is a service that enables the developer to be much more efficient with their valuable time when developing and deploying ML models. This methodology is applicable across many learning algorithms and many production use cases.

By the end of this lesson, you should be able to:

- Launch a processing Job
- Launch a Training Job
- Deploy an Endpoint
- Launch a Batch Transform Job

Please note, the features offered by Amazon Web Services are often updated and improved. In some cases, this may change the way the features are accessed or appear in the console. But don't worry! In most cases, the generic workflow progression will remain the same!
