Exercise: Ground Truth

Use Sagemaker Ground Truth label a sentiment dataset.

Procedures for this exercise:

1. Launch the AWS Gateway.
2. Upload the `sentiment_data.jsonl` from the Github repo you should have cloned earlier dataset to S3.
3. Navigate to Sagemaker Ground Truth.
4. Create a labeling project using the dataset and invite yourself to work on it. Use the `Private` worker type.
5. Set the label options for the task for text single classification: `positive` , `negative` , and `neutral` .
6. Label the dataset after receiving the private email for the task.
7. Complete the labeling project by stopping the project
8. Go to the output location of the labeling project in S3 and download the `output.manifest` file.
