Quiz: Data Cleansing and Feature Engineering

QUESTION 1 OF 2

Below are examples of datasets that need data cleansing or feature engineering. Match the description to what action you would take.

Submit to check your answer choices!

DESCRIPTION

Creating a new feature from parsing keywords from a feature containing text.

Removing data that only contain `null` values.

Normalizing a feature containing social engagements to have a zero mean.

Replacing missing numerical data with the average of the feature.

One hot encoding a weather feature that only contains `["sun", "clouds", "rain"]`.
